

Hi!! This is Rexley Charles student of ABIDAT. I take this opportunity to express my testimony about the course that I had taken for the past 10 months (2022-23). This had been a perfect option for me after the completion of my Bachelor's Degree. This exposure to Dryland Agriculture & Biotechnology had given me a chance to explore the driest regions of Israel and helped in understanding the constraints and solutions to drylands, even better.

Perfect learning experience from the world-renowned scientists of India and Israel have widened my knowledge and intellectual skills. This education that I have got could never be compensated by any other courses/Programs the general universities offer.

I'm very glad to inform you that I have been selected for the Master's Degree Program in Desert Studies by the Israeli University named BGU of Negev with full Scholarship. I thank the management and Staff of the ABIDAT for encouraging and paving way to my future endeavours. Aspirants of ABIDAT should know a fact that from this PGCDs Program one could get the best career options and a clear vision towards future .
